Dr. med. J. Karashkevica, Dr. D. Mihalovska, D. Jermacāne

Lithuanian Health Information Centre:

Dr. A. Gaižauskiene, R. Gaidelyte

The edition was prepared by:

Health Statistics and Medical Technologies State Agency, Latvia

I. Karashkevics, Computer layout

## Preface

In the 15<sup>th</sup> edition “Health in the Baltic Countries 2006” there are presented the latest data of health statistics in the Baltic Countries – Republic of Estonia, Republic of Latvia and Republic of Lithuania. The most important figures of population health – demographics, mortality causes, spread of several diseases as well as health care resources and utilization – are included in the publication.

Annual and special reports of medical institutions, computerized health databases and registers are the basic data sources. Some data of vital statistics come from the official publications of the state statistics offices of the Baltic Countries.

This publication is a joint issue of Ministry of Social Affairs of Estonia, Department of Health Information and Analysis, Health Statistics and Medical Technologies State Agency of Latvia and Lithuanian Health Information Centre. These institutions can provide more comprehensive data if necessary.

## Population at 01.01.2007

	<b>Estonia</b>	<b>Latvia</b>	<b>Lithuania</b>
<b>Population (thousand)</b>	1342.4	2281.3	3384.9
<b>Per 1 km<sup>2</sup></b>	31.0	35.3	52.0
<b>Urban (thousand)</b>	9314.2	1559.4	2260.2
<b>%</b>	69.4	68.0	66.8
<b>Rural (thousand)</b>	411.0	735.1	1124.7
<b>%</b>	30.6	32.0	33.2
<b>Males (thousand)</b>	618.2	1057.2	1577.0
<b>%</b>	46.1	46.1	46.6

## Obstetric Definitions

Live birth -	Foetus that after complete expulsion or extraction from its mother breathes or shows any other evidence of life, irrespective of the duration of the pregnancy.	Standard rate is used for international comparison including births with a weight of 1000 g or more.
Still birth -	Death prior to the complete expulsion or extraction from its mother of a product of conception after 22 weeks of gestation. Standard rate is used for international comparison including births with a weight of 1000 g or more.	Maternal death - The death of a woman while pregnant or within 42 days after termination of pregnancy, irrespective of the duration and the site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management, but not from accidental or incidental causes.
Infant death -	Live-born infant that dies during the first year of life.	Abortion - Spontaneous or induced (legal, therapeutic, criminal) abortion is pregnancy termination or artificial extraction of the product of the conception during the first 22 weeks of gestation.
Neonatal death -	Death occurring at the age of 0 to 27 full days of life (27 days 23 hours 59 min.). The first day of life is considered as day zero.	Still birth rate - The average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given set of age-specific fertility rates.
Early neonatal death -	Death occurring at the age of 0 to 6 full days of life (6 days 23 hours 59 min.). The first day of life is considered as day zero.	
Perinatal death -	Foetal deaths and live-born infants that die at the age of 0 to 6 full days of life.
