VÄLISKAUBANDUSE ÜLEVAADE

Kaubavahetuse puudujääk suurenem

2006. aastal oli Eesti väliskaubanduse käive 284,9 miljardit krooni, eksport moodustas sellest 119,6 miljardit (42%) ning import 165,3 miljardit krooni (58%). Aastakäive suurenem 2006. aastal eelmise aastaga võrreldes 27%, eksport 24% ja import 29%. Kaubavahetuse puudujääk oli 2006. aastal 45,7 miljardit krooni. 2005. aastaga võrreldes suurenem puudujääk 45% ehk 14,1 miljardit krooni. Väliskaubanduse puudujääk suurenem 2006. aastal oluliselt kiiremini kui eelmistel aastatel.

2006. aastal eksportis Eesti kaupa 151 riiki ning importis kaupa 126 riigid. Kaubavahetuse bilanss oli positiivne 94 riigiga. Eksportis oli Euroopa Liidu riikide (EL-25) osatähtsus 65% (2005. aastal 78%) ja SRÜ riikide oma 11% (2005. aastal 9%). Kui eksport Euroopa Liidu riikidesse kasvas aastaga vaid 3%, siis eksport SRÜ riikidesse suurenem 50%. Impordis oli Euroopa Liidu osatähtsus 74% (2005. aastal 76%) ja SRÜ riikide osatähtsus 16% (2005. aastal 12%). EL riikidest suurenem import aastaga 25% ja SRÜ riikidest koguni 78%. Seega nii eksportis kui ka impordis vähenes Euroopa Liidu ja suurenem SRÜ osatähtsus. SRÜ osatähtsuse tõusu põhjus on peamiselt suurenenud kaubavahetus Venemaaga.

Eesti peamine kaubanduspartner oli Soome

Nii eksportis kui ka impordis oli Eesti peamine partnerriik Soome. 2006. aastal oli eksport Soome 21,8 miljardit krooni ning import Soomest 30,1 miljardit krooni. Võrreldes 2005. aastaga vähenes Soome osatähtsus partnerriikide seas siiski. Kui 2005. aastal läks Eesti eksportist Soome üle veerandi (26%), siis 2006. aastal alla viiendiku (18%). Eksport Soome vähenes aastaga 14%, seda põhjustas peamiselt masinate ja seadmete väljaveo vähenemine. Ka impordis langes Soome osatähtsus partnerriikide seas (2005. aastal 20%, 2006. aastal 18%), kuigi import Soomest kasvas 19%.

Eksportis olid teised olulisemad partnerid veel Rootsi (osatähtsus 12% eksportist), Läti (9%), Venemaa (8%) ning Ameerika Ühendriigid (7%). Tunduvalt suurenem kaupade väljavedu Ameerika Ühendriikidesse (5 miljardi krooni võrra), Gibraltarile (4 miljardit krooni) ja Venemaale (3,2 miljardit krooni). Aastaga suurenem eksportis enim Venemaa ja Ameerika Ühendriikide osatähtsus.

Impordis järgnesid Soomele Venemaa (osatähtsus 13% impordist), Saksamaa (12%), Rootsi (9%) ning Leedu (7%). Oluliselt suurenem kauba sissevedu Venemaalt (9,9 miljardit krooni) ning nimetatud tõusus partnerriikide seas kolmandalt kohalt teisele. Samuti suurenem tunduvalt import Lätiist (3,5 miljardi krooni võrra) ning Rootsist (3,4 miljardit krooni). Ka impordis suurenem köige enam Venemaa osatähtsus.

Kaupadest oli suurim osatähtsus masinatel ja seadmetel

Nii eksportis kui ka impordis on peamine kaubaartikkel masinad ja seadmed — mõlema puhul (sisse- ja väljavedu) moodustab see veerandi kogu kaubavahetusest. Siiski vähenes aasta jooksul masinate ja seadmete osatähtsus nii eksportis kui ka impordis. 2006. aastal oli masinate ja seadmete eksport 29,4 miljardit krooni ning import 42 miljardit krooni. Aastaga kasvas nende eksport 8% ning import 5%. Kaubavahetuse bilansi puudujääk oli masinate ja seadmete puhul 12,6 miljardit krooni ja see moodustas 28% kogu kaubavahetuse puudujäägist. Ka 2007. aastaks võib prognoosida masinate ja seadmete eksporti ning impordi kasvutempo aeglustumist, sest väheneb Eestis tehtavate allhanketööde maht.

Teine tähtsam kaubaajotis Eesti väliskaubanduses on mineraalsed kütused. Aastaga suurenem mineraalsete kütuste osatähtsus Eesti väliskaubanduses oluliselt. Kui 2005. aastal oli nende eksporti osatähtsus kogueksportis 8% ning impordis 9%, siis 2006. aastal oli osatähtsus mõlemas kaubavoos juba 16%. Mineraalseste kütuste eksport kasvas 2,6 korda ning import 2,3 korda, kaubavahetuse puudujääk oli 7,6 miljardit krooni. Mineraalseste kütuste eksporti ja impordi kiiret kasvu seletab see, et varem Eestit transiidina läbinud kaubavood jõuavad nüüd ametlikku statistikasse. Kütuste vahendajad on senisest enam hakanud Eesti territooriumil tegelema ka kauba töötlemise, ladustamise ning edasi-müümisega, mistõttu ei ole tehingud enam transiidina käsitletavad.

Impordis on oluline osatähtsus ka transpordivahenditel — need moodustasid 2006. aastal 12% kaupade koguimpordist. Eksportis on transpordivahendite osatähtsus vaid 7%. Aastaga kasvas transpordivahendite sissevedu koguni 51%. Transpordivahendid annavad ka olulise osa väliskaubanduse puudujäägist. 2006. aastal ületas nende sissevedu eksporti 11,9 miljardit krooni ja see moodustas 26% kogu väliskaubanduse puudujäägist. Suure

puudujäägi põhjus on asjaolu, et transpordivahendite kohapealset tootmist peaaegu ei eksisteeri.

Positiivne oli väliskaubanduse bilanss vaid puidu ja puittoodete ning mitmesuguste tööstustoodete (peamiselt mööbel) kaubavahetuses. Puidu ja puittoodete puhul ületas eksport importi 5,8 miljardi ning muude tööstustoodete puhul 4,9 miljardi krooniga. Samas vähenes mõlema kaubajaotise osatähtsus Eesti ekspordis ning puidu ja puittoodete eksport suurennes aastaga vaid 2% ning muude tööstustoodete väljavedu 11% — see on oluliselt madalam ekspordi keskmisest kasvutempost. Samas kasvas puidu ja puittoodete import 19%, mis viitab sellele, et on suurenenud välimaisse tooraine kasutamine.

Ainus kaubajaotis, mille eksport 2006. aastal vähenes, oli tekstiil ning tekstiilitooded. Aastaga vähenes nende eksport 11% ning kaubajaotise osatähtsus kogu ekspordis langes 7%-st 5%-ni. Import suurennes samal ajal 13%. Ekspordi vähenemine on tingitud sellest, et mitmed suuremad tootjad on tootmismahatusid vähendanud ning viivad tootmise üle väiksema tööjöukuluga piirkondadesse.

OVERVIEW OF FOREIGN TRADE

The foreign trade deficit increased

In 2006, the turnover in foreign trade accounted for 284.9 billion kroons, involving exports for 119.6 billion kroons (42%) and imports for 165.3 billion kroons (58%). Compared to the previous year, the turnover of Estonia's foreign trade increased by 27%, exports increased 24% and imports 29%. The trade deficit made up 45.7 billion kroons. Compared to the previous year, the trade deficit increased by 45% or by 14.1 billion kroons.

The growth in the foreign trade deficit in 2006 was much faster than in the previous years.

In 2006 Estonia exported goods into 151 countries and imported goods from 126 countries. The trade balance was positive with 94 countries. The share of EU countries (EU-25) in exports accounted for 65% (78% in 2005). Exports to the CIS countries accounted for 11% of the total exports (9% in 2005). The exports to EU countries increased by only 3%, whereas exports to the CIS countries increased 50%. The share of EU countries (EU-25) in imports was 74% (76% in 2005). The imports from the CIS countries formed 16% of the total imports (12% in 2005). The imports from EU countries increased 25% and from the CIS countries 78%. Therefore the share of EU countries in both exports and imports decreased and the proportion of the CIS countries increased in both flows. The main reason for such an increase in the proportion of the CIS countries is the growth in the exchange of goods with Russia.

The main trading partner was Finland

Finland was the main trading partner in exports and imports. In 2006 the exports to Finland accounted for 21.8 billion kroons and imports from this country were 30.1 billion kroons. Still compared to 2005 the share of Finland decreased among the trade partners. In 2005 the exports to Finland were over a quarter (26%), but in 2006 it was below a fifth (18%). The exports decreased 14% and it was caused by the decrease in the exports of machinery and equipment. In imports the share of Finland decreased among the trading partners (20% in 2005 and 18% in 2006), but the imports from Finland increased 19%.

Other main trading partners in exports were Sweden (12% from the total exports), Latvia (9%), the Russian Federation (8%) and the United States (7%). There was a significant increase in exports to the United States (by 5 billion kroons), Gibraltar (by 4 billion kroons) and the Russian Federation (by 3.2 billion kroons). Exports to the Russian Federation and the United States formed a major share in exports.

The Russian Federation followed Finland (13% from the total imports), Germany (12%), Sweden (9%) and Lithuania (7%) in imports. There was a significant increase in imports from the Russian Federation (by 9.9 billion kroons) which rose from the third place to the second place. At the same time there was a significant increase in imports from Latvia (by 3.5 billion kroons) and Sweden (by 3.4 billion kroons). The share of the Russian Federation also increased in imports.

Machinery and equipment accounted for the largest proportion of goods

The main article of trade in exports and imports is machinery and equipment, accounting for a quarter of the total trade in both flows. Still the share of machinery and equipment has decreased in exports and imports. In 2006 the exports of machinery and equipment made up 29.4 billion kroons and imports were 42 billion kroons. Compared to the previous year the exports of machinery and equipment increased 8% and imports 5%. The trade deficit of these goods accounted for 12.6 billion kroons and formed 28% of the total trade deficit. A slowdown of the growth in the exports and imports of machinery and equipment can be forecast for the year 2007, because the volume of subcontracting implemented in Estonia is decreasing.

The second main article of foreign trade is mineral fuels, the share of which in the Estonian foreign trade has significantly increased compared to the previous year. In 2005 the share of exports of mineral products made up 8% of the total exports and 9% of the imports, but in 2006 the share of both exports and imports was equally 16%. The exports of mineral fuels increased 2.6 times and imports 2.3 times. The trade deficit of these goods was 7.6 billion kroons. The fast growth in the exports and imports of mineral products can be explained by the fact that the goods flows which previously crossed Estonia as transit are now included in the official statistics. Companies intermediating fuels have begun handling processing, warehousing and forward selling in the Estonian territory in a greater volume than earlier, and these transactions are not considered as transit any more.

Transport equipment accounts for a significant proportion in imports. In 2006 the share of transport equipment made up 12% of the total imports. In exports the share of transport equipment accounted for only 7%. Compared to the previous year the imports of transport equipment increased 51%. This article of goods forms a significant part of the trade deficit in foreign trade. In 2006 imports exceeded exports by 11.9 billion kroons, which made up 26% of the trade deficit in the total foreign trade, which may have been caused by the non-existence of the production of transport equipment in Estonia.

The positive trade deficit could only be noted in the trade of wood and products thereof and miscellaneous manufactured articles (mainly furniture). In case of wood and products thereof the exports was bigger than imports by 5.8 billion kroons and in case of miscellaneous manufactured articles by 4.9 billion kroons. At the same time the share of exports of both articles of trade (wood and products thereof and miscellaneous manufactured articles) decreased while the exports of wood and products thereof only increased by 2% and the exports of miscellaneous manufactured articles by 11%, which is significantly lower than the average growth rate of exports. At the same time the imports of wood and products thereof increased 19%, which may refer to the increase in using foreign raw materials.

There was a decrease only in exports of textiles and products thereof. Compared to the previous year the exports of textiles and products thereof decreased 11% and the share of this article in the total exports fell from 7% to 5%, whereas imports increased 13%. Several major manufacturers have cut their production capacity and are moving manufacturing to the districts with lower labour costs, which may have caused the decrease in exports.

^aVäliskaubanduse andmete tölgendamisel maakonniti tuleb arvestada, et esitatud andmed kajastavad kaupu eksportivate ja importivate ettevõtete asukohta, st eksportidatav kaup ei ole sageli toodetud selles maakonnas, kus paikneb seda kaupa eksportiv ettevõte, ja imporditud kaup ei tarbita alati selles maakonnas, kus paikneb kaupu importiv ettevõte.

^bMaaakond võib määramata olla Eestis tegutsevate välisfirmade puhul

^aWhen interpreting the foreign trade data by counties it should be born in mind that the given data show the location of enterprises exporting or importing commodities, i.e. the exported commodities have sometimes not been produced in the county where the enterprise exporting these commodities is located, and the imported commodities are not always consumed in the county where the enterprise that imported these commodities is located.

^bThe county unknown can be in case of foreign representatives operating in Estonia.

6. SÖIDUKID, V.A RAUDTEE- JA TRAMMITEEVEEREM, NING NENDE OSAD JA TARVIKUD

Ülevaade sõidukite (v.a raudtee- ja trammiteeveeremi) ning nende osade ja tarvikute eksportist, 2006

2006. aastal eksportiti sõidukeid, nende osi ja tarvikuid 6,8 miljardi krooni eest. Võrreldes 2005. aastaga suurenem väljavedu ligi 1,6 miljardit krooni — eksportikasv oli 31%.

Kõige suurema osatähtsusega rubriik sõidukite väljaveos on sõiduautod ja muud mootorsõidukid, peamiselt reisijateveoks, k.a universaalid ja võidusõiduautod (rubriik 8703). Viimastel aastatel on nimetatud rubriigi osatähtsus pidevalt kasvanud. 2004. aastal moodustasid sõiduautod kogu grupist 34%, 2005. juba 49%, 2006. aastal on nende osatähtsus aga tõusnud meie andmetel üle poole (55%) sõidukite eksportkäibest. Peamised sihtriigid olid Läti (56%) ja Leedu (28%). Võrreldes 2005. aastaga viidi 2006. aastal Venemaale kaks korda rohkem sõiduautosid.

Sõiduautode kõrval on suuruselt järgmine eksportitav kaubagrupp KN rubriikide 8701–8705 mootorsõidukite osad ja tarvikud. Nende osatähtsus oli sõidukite eksportdimahust 26%. Võrreldes 2005. aastaga kasvas selle gruvi väljavedu 19%. Enamus KN rubriikide 8701–8705 mootorsõidukite osadest ja tarvikutest lähetatakse Rootsi (52%).

Haagiste ja poolhaagiste ning muude mehaanilise jõuallikata sõidukite ja nende osade väljavedu hõlmas 10% kogu eksporti summast. Võrreldes 2005. aastaga kasvas nende väljavedu 24%. Selles rubriigis on suurim väljaveopartner Soome, kelle osatähtsus on 29%. Märgatavalt on tõusnud eksport Rootsi, Leetu ja Venemaale.

Kaubaveoks mõeldud mootorsõidukite väljavedu moodustas 4% sõidukite eksporti summast. Eksportikäibe kasv oli võrreldes 2005. aastaga 42%. Peamine sihtriirk oli Läti (48%).

Ülevaade sõidukite (v.a raudtee- ja trammiteeveeremi) ning nende osade ja tarvikute impordist, 2006

2006. aastal oli sõidukite, nende osade ja tarvikute impordimaht 17,7 miljardit krooni. Võrreldes 2005. aastaga suurenem sissevedu peaaegu poole võrra — 47%. Absoluutne juurdekasv oli 5,6 miljardit krooni.

Sarnaselt eksportiga on ka sisseveos suurima osatähtsusega rubriik sõiduautod ja muud mootorsõidukid, peamiselt reisijateveoks, k.a universaalid ja võidusõiduautod (62% impordi summast). Nimetatud rubriigi sissevedu kasvas 2006. aastal 54%, absoluutne juurdekasv oli 3,8 miljardit krooni. Kaks kolmandikku impordist katavad kaks partnerriiki: Soome (46%) ja Saksamaa (20%). 2006. aastal kasvas sissevedu Soomest 62% ja Saksamaalt 17%. Absoluutne juurdekasv oli vastavalt 1,9 miljarit krooni ning 316 miljonit krooni.

Kaubaveoks mõeldud mootorsõidukite (rubriik 8704) sissevedu hõlmas 14% kogu sõidukite impordi summast. Sissevedu suurenem 2006. aastal 83%, absoluutne kasv oli 1,2 miljardit krooni. Peamised saatjariigid olid Saksamaa (37%) ja Soome (17%). Saksamaalt sissevedu kahekordistus ja suurenem 474 miljonit krooni. Soomest kasvas import peaaegu poole võrra (48%) — 143 miljonit krooni.

KN rubriikide 8701–8705 mootorsõidukite osade ja tarvikute sissevedu oli kogu sõidukite impordi summast 8%. Sissevedu suurenem 2006. aastal 10%, absoluutne kasv oli 127 miljonit krooni.

Traktorite sissevedu moodustas 6% sõidukite impordi summast. 2006. aastal kasvas sissevedu 7%, absoluutne juurdekasv oli 69 miljonit krooni. Suurima osatähtusega partnerriigid selles rubriigis olid Rootsi (22%) ja Saksamaa (18%).

METOODIKA, MÖISTED

Et Eesti liitus 1. mail 2004 Euroopa Liiduga, muutus väliskaubanduse andmete kogumise süsteem.

Euroopa Liitu mittekuuluvate riikide kohta (nn kolmandad riigid) peetud kaubavahetuse andmed põhinevad tollideklaratsioonide andmetel (Extrastat). Kasutatakse mõisteid **eksport ja import**.

Euroopa Liidu liikmesriikide vaheliste tehtingute kohta kogutakse kaubavahetuse andmeid statistiliste aruannetega (Intrastat). Kasutatakse mõisteid **kauba lähetamine ja kauba saabumine**.

Kogu väliskaubandusstatistika (nii Extrastat kui ka Intrastat) koostamisel kasutatakse mõisteid **eksport ja import**.

Kaupade klassifitseerimisel on aluseks kaheksakohalised kombineeritud nomenklatuuri (KN, kasutusele võetud alates 2004. aasta maist) kaubakoodid, mida uuendatakse igal aastal.

Metoodika muutused, millega Eesti peab arvestama Euroopa Liiduga liitumise (1. mai 2004) eelse ja järgse statistika võrdlemisel.

1. Liitumiseelne väliskaubandusstatistika põhines tollideklaratsioonidel ja hõlmas peaaegu kogu kaubavahetust. Liitumisjärgse Euroopa Liidu (EL) riikide vahelise kaubavahetusstatistika koostamiseks kogutakse Intrastati kuuaruandeid, mida peavad esitama ainult need ettevõtted, kelle eksporti- või impordikäive ELi riikidega ületas aruandeperiodile eelenenud aastal üks miljon krooni (2006. aastal kaks miljonit krooni). Vaatlusest väljajääv osa lisatakse hinnangute põhjal. Ettevõtete aruannete esitamatajätmisest, puudulikust tätmisest, hilinemisega saatmisest tekkinud andmekadu asendatakse samuti hinnangutega. Hinnanguid tehakse kaupade väärtsuse kohta kahekohaliste kaubakoodide ja riikide tasemel. Tulenevalt sellest sisaldavad hinnanguid vaid üldosas esitatud tabelid riigiti ja kaubajaotiste järgi. Pöllumajandussaaduste, puidu- ja puittoodete, metalli ja metalltoodete, masinate ja seadmete ning transpordivahendite ja mineraalse kütuse eksportist ja impordist põhjalikumat ülevaadet esitavad tabelid sisaldavad vaid ettevõtetelt kogutud andmeid (nn realsed andmed). Analüüsides on samuti koostatud reaalsete andmete põhjal (hinnanguid ei ole arvesse võetud).

2. Intrastati puhul ei ole põhikaubandussüsteemi järgi koostatav statistika samaväärne tollideklaratsioonide alusel kogutavate põhikaubandus-süsteemi andmetega. Suur osa kaubast, mis varem liikus tolli järelevalve all tolliladudes ja mida põhikaubandussüsteemi reeglite järgi statistikas ei arvestatud, on nüüd vabas ringluses ja võetud statistikasse, kuna ELi sisese kaubanduse puhul asendusid tollilaod vaheladudega.

3. Varasem Eesti väliskaubandusstatistika on üldjuhul avaldatud päritoluriigi järgi. Liikmesriikidevahelise kaubanduse puhul on kauba saabumisel partnerriigiks **saatjariik**. Seetõttu on selles kogumikus andmed samuti **saatjariigi** järgi avaldatud.

4. Valuutade konverteerimise reeglite muutus (eelmise kuu viimase päeva kursi asemel aruandekuu keskmise kursi või tehtingu toimumise päeva kursi kasutamine) võib tekitada reaalseid nihkeid väljaveo- ja sisseveokäivetes, kus valuuta on köikuvama kursiga.

METHODOLOGY, DEFINITIONS

The data collection system of foreign trade statistics changed due to Estonia's accession to the European Union on 1 May 2004.

As previously, data about the trade of Estonia with non-EU countries (the so-called third states) are based on customs declarations (Extrastat). The concepts of exports and imports are used.

Data about the trade between EU Member States are collected by statistical surveys (Intrastat). The concepts dispatches and arrivals are used.

The concepts of exports and imports are used in case of compiling all foreign trade statistics.

Commodities are classified according to eight-digit numerical codes of the Combined Nomenclature (hereinafter CN; introduced in May 2004 and updated every year).

The changes in methodology that have to be taken into consideration when comparing statistics produced prior to and after the accession of Estonia to the European Union (1 May 2004).

1. Before the accession, foreign trade statistics were based on customs declarations and covered the trade almost completely. Foreign trade statistics between the European Union Member States after the accession are based on Intrastat monthly reports, which have to be submitted by only those enterprises whose value of exports or imports in trade with Member States exceeded 1 million kroons in the year preceding the reference period (2 million kroons in year 2006). The data for the remaining enterprises are estimated. Also the data missing due to non-response, insufficient completion of questionnaires and delays in sending the data are replaced by estimations by 2-digit codes and countries. Hereby the estimation is only included in the data presented in the general part on foreign trade by countries and commodity sections. The tables containing more detailed overviews about the exports and imports of agricultural products, wood and articles of wood, metal and articles of metal, machinery and appliances, exports and imports of transport vehicles and mineral fuels include only the data submitted by enterprises (the so-called real data). Analyses are compiled also on the basis of real data (estimation is excluded).

2. In case of Intrastat, statistics compiled by a special trade system do not coincide with the data compiled on the basis of a special trade system of customs declarations. A large proportion of goods, which formerly moved under the supervision of customs authorities in customs warehouses and were not taken into account in statistics according to the rules of the special trade system, are now in free circulation and included into statistics, since customs warehouses were replaced by intermediate depots in the case of the internal EU trade.

3. Estonia's foreign trade statistics prior to the accession to the EU have been published by the country of origin. In the case of the trade between Member States, the country of consignment is the partner country at arrival of goods. Therefore, the data in this publication are also presented by the country of consignment.

4. The change in the currency conversion rules (the use of the average exchange rate or the exchange rate of the day of transaction instead of the rate of the last day of the previous month) may cause real deviations in export and import values, where the currency has a more fluctuating rate.
